

PROJECT: Southwark Cathedral

LIGHTING DESIGN: LAPD

MANUFACTURER: iGuzzini

LAPD took candlelight as its inspiration to add a theatrical element to the lighting of Southwark Cathedral by applying different colours to the various layers. The new Millennium building was lit with blue, the nave with orange and the central tower with red light. Particular intensity was given to the architecture of the tower and the spires.

PROJECT: HMS Belfast

LIGHTING DESIGN: Mindseye

MANUFACTURER: Lighting Effects Distribution

Colour and shape were once used to disguise the shape and direction of battleships from U-boats. Mindseye's scheme is inspired by the camouflage exhibition at the Imperial War Museum. Theatrical moving head projectors and RGB LED projectors inject colour and dazzle patterns onto the ship. Fittings on the deck and off the ship cover large areas of the hull.
